

Key Data Collection, Analysis, and Sharing Strategies:

- Conduct initial research into a range of available data sources.
- Collect relevant data necessary to define safety needs and support decision-making processes.
- Prepare a traffic records improvement strategic plan and data collection task forces or committees.
- Provide training in the collection, analysis, and use of safety data.
- Use data to select and implement appropriate systemic improvements to the transportation network and identify projects to improve safety at high-crash locations.
- Use data to monitor and evaluate the outcomes and results of safety projects and programs.
- Use data to justify the need for resources to support implementation of safety projects and programs.
- Establish data sharing protocols to ensure all stakeholders are working from the same data sets and have access to the data they need.
- Allow State and local agency partners to query safety data directly.
