Protection of Data from Discovery & Admission into Evidence

23 U.S.C. 148(h)(4) states “Notwithstanding any other provision of law, reports, surveys, schedules, lists, or data compiled or collected for any purpose relating to this section [HSIP], shall not be subject to discovery or admitted into evidence in a Federal or State court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location identified or addressed in the reports, surveys, schedules, lists, or other data.”

23 U.S.C. 409 states “Notwithstanding any other provision of law, reports, surveys, schedules, lists, or data compiled or collected for the purpose of identifying, evaluating, or planning the safety enhancement of potential accident sites, hazardous roadway conditions, or railway-highway crossings, pursuant to sections 130, 144, and 148 of this title or for the purpose of developing any highway safety construction improvement project which may be implemented utilizing Federal-aid highway funds shall not be subject to discovery or admitted into evidence in a Federal or State court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location mentioned or addressed in such reports, surveys, schedules, lists, or data.”

State of Hawaii 2014 23 U.S.C. 148(g)

Annual Highway Safety Improvement Program Report

The State of Hawaii is focusing on the reduction of the number of traffic deaths and serious injuries.

The State of Hawaii has benefited by the ability to use HSIP Flex Funding to address non-infrastructure safety projects.
Introduction

The Highway Safety Improvement Program (HSIP) is a core Federal-aid program with the purpose of achieving a significant reduction in fatalities and serious injuries on all public roads. As per 23 U.S.C. 148(h) and 23 CFR 924.15, States are required to report annually on the progress being made to advance HSIP implementation and evaluation efforts. The format of this report is consistent with the HSIP MAP-21 Reporting Guidance dated February 13, 2013 and consists of four sections: program structure, progress in implementing HSIP projects, progress in achieving safety performance targets, and assessment of the effectiveness of the improvements.

Program Structure

Program Administration

How are Highway Safety Improvement Program funds allocated in a State?

- Central
- District
- Other

Describe how local roads are addressed as part of Highway Safety Improvement Program.

High accident listings and accident data for county roads are submitted to the county offices for internal design use. Local agencies can submit project proposals to be considered on the Statewide Transportation Improvement Program (STIP) and the projects can be funded through HSIP funds if they are cost-effective. In addition, HRRRP Funds were offered to the counties in January 2008.

Identify which internal partners are involved with Highway Safety Improvement Program planning.
Design
Planning
Maintenance
Operations
Governors Highway Safety Office
Other: Other-
Highway Safety Office assists with the management of non-infrastructure HSIP funds.

Briefly describe coordination with internal partners.

The HSIP projects are initiated through the analysis of crash data and traffic volume counts obtained by the Planning Branch. The HSIP project locations are evaluated to determine if other projects submitted by internal partners (Design, Planning, Maintenance, or Operations) can be coordinated or project scope can be incorporated within existing projects.

Internal partners assist with project selection preparation of preliminary project scope through field investigations. Partners from the offices of design, maintenance and law enforcement participate in the preliminary project scope.

The Highway Safety Office proposes non-infrastructure projects to be funded through HSIP flex funding.

Identify which external partners are involved with Highway Safety Improvement Program planning.

Metropolitan Planning Organizations
Governors Highway Safety Office
Local Government Association
Other: Other-Police departments
Identify any program administration practices used to implement the HSIP that have changed since the last reporting period.

- Multi-disciplinary HSIP steering committee
- Other: Other-Police involvement in preliminary project scoping.

Describe any other aspects of Highway Safety Improvement Program Administration on which you would like to elaborate.

Statewide projects are submitted to be considered on the STIP.

Focus is more on corridor low-cost safety improvements versus black spots.

**Program Methodology**

Select the programs that are administered under the HSIP.

- Median Barrier
- Horizontal Curve
- Skid Hazard
- Roadway Departure
- Local Safety
- Left Turn Crash
- Other:
- Intersection
- Bicycle Safety
- Crash Data
- Low-Cost Spot Improvements
- Pedestrian Safety
- Shoulder Improvement
- Safe Corridor
- Rural State Highways
- Red Light Running Prevention
- Sign Replacement And Improvement
- Right Angle Crash
- Segments
Program: Crash Data

Date of Program Methodology: 9/9/2006

What data types were used in the program methodology?

**Crashes**
- □ All crashes
- □ Fatal crashes only
- □ Fatal and serious injury crashes only
- □ Other

**Exposure**
- □ Traffic
- □ Volume
- □ Population
- □ Lane miles
- □ Other

**Roadway**
- □ Median width
- □ Horizontal curvature
- □ Functional classification
- □ Roadside features
- □ Other

What project identification methodology was used for this program?

- □ Crash frequency
- □ Expected crash frequency with EB adjustment
- □ Equivalent property damage only (EPDO Crash frequency)
- □ EPDO crash frequency with EB adjustment
- □ Relative severity index
- □ Crash rate
- □ Critical rate
- □ Level of service of safety (LOSS)
☐ Excess expected crash frequency using SPFs
☐ Excess expected crash frequency with the EB adjustment
☐ Excess expected crash frequency using method of moments
☐ Probability of specific crash types
☐ Excess proportions of specific crash types
☒ Other-Crash severity

Are local roads (non-state owned and operated) included or addressed in this program?

☒ Yes
☐ No

If yes, are local road projects identified using the same methodology as state roads?

☐ Yes
☒ No

If no, describe the methodology used to identify local road projects as part of this program.

The listings for county roads are ranked according to the accident frequency instead of the rates because of the lack of traffic volume data.

How are highway safety improvement projects advanced for implementation?

☐ Competitive application process
☐ Selection committee
☒ Other-Submitted to be included in the STIP. Follow with collaboration with Districts.

Select the processes used to prioritize projects for implementation. For the methods selected, indicate the relative importance of each process in project prioritization. Enter either the weights or numerical rankings. If weights are entered, the sum must equal 100. If ranks are entered, indicate ties by giving both processes the same rank and skip the next highest rank (as an example: 1, 2, 2, 4).

☐ Relative Weight in Scoring
Rank of Priority Consideration

- Ranking based on B/C 2
- Available funding 3
- Incremental B/C
- Ranking based on net benefit
- Cost Effectiveness 1

What proportion of highway safety improvement program funds address systemic improvements?

0

Highway safety improvement program funds are used to address which of the following systemic improvements?

- Cable Median Barriers
- Traffic Control Device Rehabilitation
- Install/Improve Signing
- Upgrade Guard Rails
- Safety Edge
- Add/Upgrade/Modify/Remove Traffic Signal
- Rumble Strips
- Pavement/Shoulder Widening
- Install/Improve Pavement Marking and/or Delineation
- Clear Zone Improvements
- Install/Improve Lighting
- Other
What process is used to identify potential countermeasures?

- Engineering Study
- Road Safety Assessment
- Other:

Identify any program methodology practices used to implement the HSIP that have changed since the last reporting period.

- Highway Safety Manual
- Road Safety audits
- Systemic Approach
- Other: Other-None

Describe any other aspects of the Highway Safety Improvement Program methodology on which you would like to elaborate.

During this period, run off roadway and median crossover type accidents were targeted. HDOT is currently focusing on reducing fatalities and serious injury type accidents by implementing low-cost safety improvement projects along corridors with a history of theses types of accidents. In Hawaii, these types of accidents have a greater potential of reducing fatalities and serious injury accidents cost-effectively, in comparison to “black spot” type projects. HDOT is collaborating with the University of Hawaii to develop a Systemic Roadway Departure Plan.
With the development of this plan, HDOT hopes to address more systemic safety improvements with proven low-cost safety countermeasures.
Progress in Implementing Projects

### Funds Programmed

Reporting period for Highway Safety Improvement Program funding.

- [ ] Calendar Year
- [ ] State Fiscal Year
- [x] Federal Fiscal Year

Enter the programmed and obligated funding for each applicable funding category.

How much funding is programmed to local (non-state owned and maintained) safety projects?
$1,350,000.00

How much funding is obligated to local safety projects?
$0.00

How much funding is programmed to non-infrastructure safety projects?
$3,012,066.00

How much funding is obligated to non-infrastructure safety projects?
$2,265,000.00

How much funding was transferred in to the HSIP from other core program areas during the reporting period?
$0.00

How much funding was transferred out of the HSIP to other core program areas during the reporting period?

$0.00

Discuss impediments to obligating Highway Safety Improvement Program funds and plans to overcome this in the future.

The penalty transfer is impacting the HSIP core obligation rate. Our administration plans to introduce legislation to attain compliance. Systemic Roadway Departure Program may improve the obligation of funds when developed and implemented. We would like to have more projects initiated and assigned for design and construction. There is an inability of design staff to handle the workload. Areas such as: 106, right-of-way, and environmental requirements delay projects.

Please note that although the reporting period for the HSIP funding is for FFY 2014, the funding amounts reported in the previous questions are reported as of August 2014.

Describe any other aspects of the general Highway Safety Improvement Program implementation progress on which you would like to elaborate.

Progress of all HSIP projects is monitored very closely. HSIP program staff follow-up with project managers and fiscal staff on a regular basis to track project schedules and make adjustments and modifications to the program to minimize the potential for lapsing funds, as well as spend HSIP funds efficiently.
### General Listing of Projects

List each highway safety improvement project obligated during the reporting period.

Describe any other aspects of the general highway safety trends on which you would like to elaborate.

An uptrend in the statistics should not imply a decrease in safety of the infrastructure. The economy is not accounted for in these figures, yet it has a significant impact on driver behavior and safety on the roadways.

We are unable to provide information at this time for functional classification.

**Application of Special Rules**

*Present the rate of traffic fatalities and serious injuries per capita for drivers and pedestrians over the age of 65.*

<table>
<thead>

</table>

*Performance measure data is presented using a five-year rolling average.

** Please note that 2012 & 2013 data is unavailable at this time. However, 5-yr performance measure data table above requires value in the 2012 fatality and serious injury rate to update the table.

Calculation Rate for 2007 - 2011 Fatality and Serious Injury Rate =

\[
\frac{(F+SI\ 2007\ Drivers\ and\ Pedestrians\ 65\ years\ of\ age\ and\ older/2007\ population\ figure) + (F+SI\ 2008\ Drivers\ and\ Pedestrians\ 65\ years\ of\ age\ and\ older/2008\ population\ figure) + (F+SI\ 2009\ Drivers\ and\ Pedestrians\ 65\ years\ of\ age\ and\ older/2009\ population\ figure) + (F+SI\ 2010\ Drivers\ and\ Pedestrians\ 65\ years\ of\ age\ and\ older/2010\ population\ figure)}{5}
\]
(F+SI 2011 Drivers and Pedestrians 65 years of age and older/2011 population figure)/5

2007 - 2011: [(36/144)+(40/147)+(20/146)+(40/145)+(55/148)]/5 = .2613

* Program requires a value be entered for 2012 so 2011 value was reentered.

Rate of Fatalities and Serious Injuries for the Last Five Years

![Bar graph showing the rate of fatalities and serious injuries from 2009 to 2013. The rate is highest in 2011 and 2012, and lowest in 2009 and 2010. The y-axis represents the rate of fatalities and serious injuries, ranging from 0 to 0.3. The x-axis represents the years 2009 to 2013.]
Does the older driver special rule apply to your state?

Yes

If yes, describe the approach to include respective strategies to address the increase in those rates in the State SHSP.

This is the first year that the older driver special rule applies to Hawaii.

With the updated SHSP plan to be completed soon, we will look into the possibility of introducing this concern as a new potential emphasis area in the future.

In one of the existing emphasis areas in Hawaii’s SHSP (Lane Departure and Intersection Safety), there is a strategy that addresses the older drivers. That strategy is:

Install signs that make it easier for older drivers to see and respond (e.g. retroreflective sheeting, new font styles, etc.).

This is the first year that the older driver special rule applies to Hawaii.

With the updated SHSP plan to be completed this month, we will look into introducing this concern as a new potential emphasis area.
Assessment of the Effectiveness of the Improvements (Program Evaluation)

What indicators of success can you use to demonstrate effectiveness and success in the Highway Safety Improvement Program?

☐ None
☒ Benefit/cost
☐ Policy change
☐ Other:

What significant programmatic changes have occurred since the last reporting period?

☒ Shift Focus to Fatalities and Serious Injuries
☐ Include Local Roads in Highway Safety Improvement Program
☐ Organizational Changes
☐ None
☐ Other:

Briefly describe significant program changes that have occurred since the last reporting period.

No significant program changes since last reporting period.
## SHSP Emphasis Areas

![Bar chart showing the number of serious injuries by target crash type for each year from 2009 to 2013. The chart includes crash types such as head on, left turn, night-time, and right turn. The number of serious injuries ranges from 0 to 70.](image-url)
Serious Injury Rate by Target Crash Type for Systemic Safety Improvements

Year 2009 to Year 2013
Describe any other aspects of the overall Highway Safety Improvement Program effectiveness on which you would like to elaborate.

The State of Hawaii considers fatal and serious injury accidents for all analyses along with the total number of major traffic accidents. We will be working towards providing more of the requested data with next year’s submittal.
Provide project evaluation data for completed projects (optional).

Glossary

**5 year rolling average** means the average of five individual, consecutive annual points of data (e.g. annual fatality rate).

**Emphasis area** means a highway safety priority in a State’s SHSP, identified through a data-driven, collaborative process.

**Highway safety improvement project** means strategies, activities and projects on a public road that are consistent with a State strategic highway safety plan and corrects or improves a hazardous road location or feature or addresses a highway safety problem.

**HMVMT** means hundred million vehicle miles traveled.

**Non-infrastructure projects** are projects that do not result in construction. Examples of non-infrastructure projects include road safety audits, transportation safety planning activities, improvements in the collection and analysis of data, education and outreach, and enforcement activities.

**Older driver special rule** applies if traffic fatalities and serious injuries per capita for drivers and pedestrians over the age of 65 in a State increases during the most recent 2-year period for which data are available, as defined in the Older Driver and Pedestrian Special Rule Interim Guidance dated February 13, 2013.

**Performance measure** means indicators that enable decision-makers and other stakeholders to monitor changes in system condition and performance against established visions, goals, and objectives.

**Programmed funds** mean those funds that have been programmed in the Statewide Transportation Improvement Program (STIP) to be expended on highway safety improvement projects.

**Roadway Functional Classification** means the process by which streets and highways are grouped into classes, or systems, according to the character of service they are intended to provide.

**Strategic Highway Safety Plan (SHSP)** means a comprehensive, multi-disciplinary plan, based on safety data developed by a State Department of Transportation in accordance with 23 U.S.C. 148.

**Systemic safety improvement** means an improvement that is widely implemented based on high risk roadway features that are correlated with specific severe crash types.

**Transfer** means, in accordance with provisions of 23 U.S.C. 126, a State may transfer from an apportionment under section 104(b) not to exceed 50 percent of the amount apportioned for the fiscal year to any other apportionment of the State under that section.
