North Dakota
Highway Safety Improvement Program
2015 Annual Report

Prepared by: ND
Protection of Data from Discovery & Admission into Evidence

23 U.S.C. 148(h)(4) states “Notwithstanding any other provision of law, reports, surveys, schedules, lists, or data compiled or collected for any purpose relating to this section [HSIP], shall not be subject to discovery or admitted into evidence in a Federal or State court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location identified or addressed in the reports, surveys, schedules, lists, or other data.”

23 U.S.C. 409 states “Notwithstanding any other provision of law, reports, surveys, schedules, lists, or data compiled or collected for the purpose of identifying, evaluating, or planning the safety enhancement of potential accident sites, hazardous roadway conditions, or railway-highway crossings, pursuant to sections 130, 144, and 148 of this title or for the purpose of developing any highway safety construction improvement project which may be implemented utilizing Federal-aid highway funds shall not be subject to discovery or admitted into evidence in a Federal or State court proceeding or considered for other purposes in any action for damages arising from any occurrence at a location mentioned or addressed in such reports, surveys, schedules, lists, or data.”

Executive Summary

This year the NDDOT has completed the Local Road Safety Program (LRSP). This program provides local agencies locations for possible safety projects based on a data-driven process. This year was the first year that we have received requests for projects that were generated from the LRSP. These projects have been programmed into the safety program and will be built in the next few years.

Also, the NDDOT is transitioning to an updated HSIP Implementation Plan based on the most recent SHSP document (from September 2013). The plan emphasizes the systemic method for identifying at-risk locations and provides an outline for a “State Road Safety Plan” (SRSP). Both the SRSP and LRSP documents will be used to develop safety projects. The updated HSIP Plan also provides an improved decision making process to select appropriate countermeasures and prioritize projects.
Introduction

The Highway Safety Improvement Program (HSIP) is a core Federal-aid program with the purpose of achieving a significant reduction in fatalities and serious injuries on all public roads. As per 23 U.S.C. 148(h) and 23 CFR 924.15, States are required to report annually on the progress being made to advance HSIP implementation and evaluation efforts. The format of this report is consistent with the HSIP MAP-21 Reporting Guidance dated February 13, 2013 and consists of four sections: program structure, progress in implementing HSIP projects, progress in achieving safety performance targets, and assessment of the effectiveness of the improvements.

Program Structure

Program Administration

How are Highway Safety Improvement Program funds allocated in a State?

☐ Central
☐ District
☒ Other Solicitation process

The NDDOT sends out an annual solicitation letter to state and local agencies each year. These agencies fill out an application form for potential projects based on the high crash listings and their own knowledge of safety issues. These applications are evaluated by the NDDOT Programming Division. This has been the process for the last several years. However the NDDOT is transitioning to a more systemic approach through the development of the “Local Road Safety Plan” (LRSP). This plan identifies potential projects based on a risk assessment. Agencies have the option of developing safety projects directly from the risk assessment instead of chasing “hot spot” locations.

Describe how local roads are addressed as part of Highway Safety Improvement Program.
The NDDOT addresses safety on local roads through the Local Road Safety Program (LRSP).

**Identify which internal partners are involved with Highway Safety Improvement Program planning.**

- Design
- Planning
- [ ] Maintenance
- [ ] Operations
- Governors Highway Safety Office
- [ ] Other: Other-Safety Division, Local Government

**Briefly describe coordination with internal partners.**

**Design**
The Design Division is included in the distribution of the high crash listings. All road safety reviews require at least one member of the Design Division. Their participation and review of at-risk locations helps in the development of potential project countermeasures.

**Planning**
The Planning Division provides data for the development of the HSIP. Roadway features are collected and maintained in the Planning Division include: traffic volume, truck volumes, traffic projections, roadway features, road viewer (for state highways) and mapping. The Planning Division is also included in the distribution of the high crash listings.

**Safety Division**
Crash data and statistics are provided by the Safety Division. This information is used to identify areas of focus through the Strategic Highway Safety Plan (SHSP). The Safety Division also participates in road safety reviews.

**Local Government**
Members of the Local Government Division provide project development through city, county and tribal agencies. The local government assists in the solicitation of safety projects. They also participate in road safety reviews.
Identify which external partners are involved with Highway Safety Improvement Program planning.

- Metropolitan Planning Organizations
- Governors Highway Safety Office
- Local Government Association
- Other: Other-Cities, Counties, and Tribal Governments

Identify any program administration practices used to implement the HSIP that have changed since the last reporting period.

- Multi-disciplinary HSIP steering committee
- Other: Other-See Optional Description

A new “HSIP Implementation Plan” document has been written and is currently in the “draft” stage. The major change that is included in this document is the addition of a “systemic” analysis which is used to identify projects based on levels of risk. The draft document also refines the scheduling of the HSIP development and provided improved processes for the selection of countermeasures.

Describe any other aspects of Highway Safety Improvement Program Administration on which you would like to elaborate.

Schedule for HSIP requests:

- October 20th – send out HSIP solicitation letter and high crash location lists/maps
• December 20th – HSIP application forms (SFN 59959) are due to NDDOT (this is the cutoff date for projects to be included in the following year’s draft HSIP listing)
• January through March – NDDOT analysis of HSIP requests
• April 1st – Draft HSIP project listing
• August 1st – verify the construction year for previously approved projects
• August 31st – Final HSIP project list due to FHWA, HSIP online reporting due
• October 15th – Send responses out on approvals (or non-approvals) for the HSIP applications

Program Methodology
Select the programs that are administered under the HSIP.

☐ Median Barrier  ☑ Intersection  ☐ Safe Corridor
☐ Horizontal Curve  ☐ Bicycle Safety  ☐ Rural State Highways
☐ Skid Hazard  ☐ Crash Data  ☐ Red Light Running Prevention
☑ Roadway Departure  ☐ Low-Cost Spot Improvements  ☐ Sign Replacement And Improvement
☐ Local Safety  ☐ Pedestrian Safety  ☐ Right Angle Crash
☐ Left Turn Crash  ☐ Shoulder Improvement  ☐ Segments
☐ Other:

Program: Intersection

Date of Program Methodology: 6/17/2014

What data types were used in the program methodology?
### Crashes
- All crashes
- Fatal crashes only
- Fatal and serious injury crashes only
- Other

### Exposure
- Traffic
- Volume
- Population
- Lane miles
- Other

### Roadway
- Median width
- Horizontal curvature
- Functional classification
- Roadside features
- Other: Intersection skew, intersections of curves, intersection traffic control device, presence of adjacent development

---

**What project identification methodology was used for this program?**

- Crash frequency
- Expected crash frequency with EB adjustment
- Equivalent property damage only (EPDO Crash frequency)
- EPDO crash frequency with EB adjustment
- Relative severity index
- Crash rate
- Critical rate
- Level of service of safety (LOSS)
- Excess expected crash frequency using SPF
- Excess expected crash frequency with the EB adjustment
- Excess expected crash frequency using method of moments
- Probability of specific crash types
- Excess proportions of specific crash types
- Other: Systemic project identification, local agency or NDDOT district requests
Are local roads (non-state owned and operated) included or addressed in this program?

☑ Yes
☐ No

If yes, are local road projects identified using the same methodology as state roads?

☑ Yes
☐ No

How are highway safety improvement projects advanced for implementation?

☑ Competitive application process
☐ selection committee
☐ Other

Select the processes used to prioritize projects for implementation. For the methods selected, indicate the relative importance of each process in project prioritization. Enter either the weights or numerical rankings. If weights are entered, the sum must equal 100. If ranks are entered, indicate ties by giving both processes the same rank and skip the next highest rank (as an example: 1, 2, 2, 4).

☐ Relative Weight in Scoring
☑ Rank of Priority Consideration

☐ Ranking based on B/C
☑ Available funding  1
☐ Incremental B/C
☑ Ranking based on net benefit  2
☐ Other

1
What proportion of highway safety improvement program funds address systemic improvements?

30

Highway safety improvement program funds are used to address which of the following systemic improvements?

- Cable Median Barriers
- Traffic Control Device Rehabilitation
- Install/Improve Signing
- Upgrade Guard Rails
- Safety Edge
- Add/Upgrade/Modify/Remove Traffic Signal
- Rumble Strips
- Pavement/Shoulder Widening
- Install/Improve Pavement Marking and/or Delineation
- Clear Zone Improvements
- Install/Improve Lighting
- Other

What process is used to identify potential countermeasures?

- Engineering Study
Road Safety Assessment

</tbody>
</table>

Example calculations:
Fatality plus injury rate for 2007 = (6+9)/144 = 0.10

2007 - 2011 Average of fatalities and serious injuries = (0.10+0.13+0.15+0.22+0.32) / 5 = 0.18

Rate of Fatalities and Serious injuries for the Last Five Years

Does the older driver special rule apply to your state?

Yes
If yes, describe the approach to include respective strategies to address the increase in those rates in the State SHSP.

Because of the increasing trend in severe crashes involving older drivers, the SHSP Steering Committee discussed key strategies. From ND SHSP section 3.3.1:

Regarding infrastructure approaches to reduce these severe crashes, the strategies focus on improving signing, installing intersection lighting, and adding turn lanes; which are already priority strategies in the Lane Departure and Intersection safety emphasis areas. Furthermore, the NDDOT is already implementing these kinds of projects across the state. Policy and program strategies identified as a priority to address issues with older drivers include the following:

Review license renewal policies for older drivers identified as an excessive risk through screening by motor vehicle personnel (such as restrict vs. rescind, age and interval schedule for license renewal, etc.). Continue to evaluate policies and relevant data in the future.

Develop informational resources and conduct outreach for older driver safety screening for family, friends, physicians, and law enforcement to report at-risk drivers:

Establish a statewide "one-stop" resource to guide the public on addressing driving skill assessments, educational courses, licensing, and safe mobility choices.

Provide educational and training opportunities to the general older driver population to assess their driving capabilities and limitations, improve skills, and voluntarily limit their driving to safer driving conditions.

Establish a broad-based coalition to plan for addressing older adults’ transportation needs and strengthen transportation options.

North Dakota intends to have further consideration for older drivers in the next update to the SHSP.
Assessment of the Effectiveness of the Improvements (Program Evaluation)

What indicators of success can you use to demonstrate effectiveness and success in the Highway Safety Improvement Program?

- [x] None
- [ ] Benefit/cost
- [ ] Policy change
- [ ] Other:

What significant programmatic changes have occurred since the last reporting period?

- [ ] Shift Focus to Fatalities and Serious Injuries
- [ ] Include Local Roads in Highway Safety Improvement Program
- [ ] Organizational Changes
- [x] None
- [ ] Other:

Briefly describe significant program changes that have occurred since the last reporting period.

None
**SHSP Emphasis Areas**
For each SHSP emphasis area that relates to the HSIP, present trends in emphasis area performance measures.

5 year rolling average means the average of five individual, consecutive annual points of data (e.g. annual fatality rate).

Emphasis area means a highway safety priority in a State’s SHSP, identified through a data-driven, collaborative process.

Highway safety improvement project means strategies, activities and projects on a public road that are consistent with a State strategic highway safety plan and corrects or improves a hazardous road location or feature or addresses a highway safety problem.

HMVMT means hundred million vehicle miles traveled.

Non-infrastructure projects are projects that do not result in construction. Examples of non-infrastructure projects include road safety audits, transportation safety planning activities, improvements in the collection and analysis of data, education and outreach, and enforcement activities.

Older driver special rule applies if traffic fatalities and serious injuries per capita for drivers and pedestrians over the age of 65 in a State increases during the most recent 2-year period for which data are available, as defined in the Older Driver and Pedestrian Special Rule Interim Guidance dated February 13, 2013.

Performance measure means indicators that enable decision-makers and other stakeholders to monitor changes in system condition and performance against established visions, goals, and objectives.

Programmed funds mean those funds that have been programmed in the Statewide Transportation Improvement Program (STIP) to be expended on highway safety improvement projects.

Roadway Functional Classification means the process by which streets and highways are grouped into classes, or systems, according to the character of service they are intended to provide.

Strategic Highway Safety Plan (SHSP) means a comprehensive, multi-disciplinary plan, based on safety data developed by a State Department of Transportation in accordance with 23 U.S.C. 148.

Systemic safety improvement means an improvement that is widely implemented based on high risk roadway features that are correlated with specific severe crash types.

Transfer means, in accordance with provisions of 23 U.S.C. 126, a State may transfer from an apportionment under section 104(b) not to exceed 50 percent of the amount apportioned for the fiscal year to any other apportionment of the State under that section.
