March 7, 2014

Mr. Luke Gallagher
Ingal Civil Products
57-65 Airds Road
Minto, NSW 2566
Australia

Dear Mr. Gallagher:

This letter is in response to your request for the Federal Highway Administration (FHWA) to review a roadside safety system for eligibility for reimbursement under the Federal-aid highway program.

Name of system: Ezy-Guard Smart, MASH
Type of system: Longitudinal Barrier
Test Level: AASHTO MASH TL3
Testing conducted by: Holmes Solutions
Task Force 13 Designator: SGR49
Date of request: October 28, 2013
Date of completed package: December 20, 2013

Decision:
The following device is eligible, with details provided in the form which is attached as an integral part of this letter:
- Ezy-Guard Smart, MASH

Based on a review of crash test results you submitted certifying the device described herein meets the crash test and evaluation criteria of the American Association of State Highway and Transportation Officials’ Manual for Assessing Safety Hardware (MASH), the device is eligible for reimbursement under the Federal-aid highway program. Eligibility for reimbursement under the Federal-aid highway program does not establish approval or endorsement by the FHWA for any particular purpose or use.

The FHWA, the Department of Transportation, and the United States Government do not endorse products or services and the issuance of a reimbursement eligibility letter is not an endorsement of any product or service.
Requirements
To be found eligible for Federal-aid funding, roadside safety devices should meet the crash test
and evaluation criteria contained in the American Association of State Highway and
Transportation Officials’ Manual for Assessing Safety Hardware (MASH).

Description
The device and supporting documentation are described in the attached form.

Summary and Standard Provisions
Therefore, the system described and detailed in the attached form is eligible for reimbursement
and may be installed under the range of conditions tested. Please note the following standard
provisions that apply to FHWA eligibility letters:

• This letter provides a AASHTO/ARTBA/AGC Task Force 13 designator that should
be used for the purpose of the creation of a new and/or the update of existing Task
Force 13 drawing for posting on the on-line ‘Guide to Standardized Highway Barrier
Hardware’ currently referenced in AASHTO Roadside Design Guide.
• This finding of eligibility does not cover other structural features of the systems, nor
conformity with the Manual on Uniform Traffic Control Devices.
• Any changes that may influence system conformance with MASH will require a new
reimbursement eligibility letter.
• Should the FHWA discover that the qualification testing was flawed, that in-service
performance reveals safety problems, or that the system is significantly different from
the version that was crash tested, we reserve the right to modify or revoke this letter.
• You are expected to supply potential users with sufficient information on design and
installation requirements to ensure proper performance.
• You are expected to certify to potential users that the hardware furnished has the
same chemistry, mechanical properties, and geometry as that submitted for review,
and that it will meet the test and evaluation criteria of the MASH.
• To prevent misunderstanding by others, this letter of eligibility is designated as
number B-247 and shall not be reproduced except in full. This letter and the test
documentation upon which it is based are public information. All such letters and
documentation may be reviewed at our office upon request.
• This letter shall not be construed as authorization or consent by the FHWA to use,
manufacture, or sell any patented system for which the applicant is not the patent
holder. The FHWA does not become involved in issues concerning patent law.
Patent issues, if any, are to be resolved by the applicant.
• Because it is a steel product, the Retro-Rail™ MASH is subject to Section 635.410 (Buy America) of Title 23, U.S. Code of Federal Regulations, and cannot be permanently incorporated into any federally funded project unless it is made in the U.S. from U.S. steel.

Sincerely yours,

Michael S. Griffith
Director, Office of Safety Technologies
Office of Safety

Enclosures
Request for Federal Aid Reimbursement Eligibility
Of Highway Safety Hardware

Date of Request: October 28, 2013

Name: Luke Gallagher
Company: Ingal Civil Products
Address: 57-65 Airds Rd., Minto, NSW 2566
Country: Australia

To: Michael S. Griffith, Director
FHWA, Office of Safety Technologies

I request the following devices be considered eligible for reimbursement under the Federal-aid highway program.

<table>
<thead>
<tr>
<th>System Type</th>
<th>Submission Type</th>
<th>Device Name / Variant</th>
<th>Testing Criterion</th>
<th>Test Level</th>
</tr>

PRODUCT DESCRIPTION

New Hardware
Ezy-Guard Smart is a narrow, guardrail barrier system comprising standard w-beam rail supported by steel posts and sliding carriages.

Ezy-Guard Smart posts are cold formed into a Z cross section of approximately 50mm (2 inch) wide x 90mm (3.54 inch) deep. The Z-posts are 1600mm long (62.99 inch). The Z-posts are hot dip galvanized and are installed to an above-ground height of 720mm (28.35 inch) at 2m (6.6 feet) centres.

The rail elements are standard 12 gauge, galvanized w-beam conforming to AASHTO M180 Class A rail. The height to top of rail is 730mm (28.74 inch). The rails are secured to a sliding carriage using a M16 (5/8") x 30mm (1.18 inch) long bolt with a hexagonal recess.

In the safety performance evaluation of Ezy-Guard Smart, two full-scale crash tests were conducted.

MASH Test Designation 3-10:
Ezy-Guard Smart successfully contained and redirected the 1100C vehicle. The vehicle did not penetrate or underride the barrier. Maximum dynamic deflection of the barrier was 994mm (39.13 inch).

MASH Test Designation 3-11:
Ezy-Guard Smart contained and redirected the 2270P vehicle. The vehicle did not penetrate or underride the barrier. Maximum dynamic deflection of the barrier was 1650mm (64.96 inch).

CRASH TESTING

</tbody>
</table>

Full Scale Crash Testing was done in compliance with MASH by the following accredited crash test laboratory (cite the laboratory's accreditation status as noted in the crash test reports):

Laboratory Name: Holmes Solutions
Laboratory Contact: Chris Allington
Address: Level 2, 123 Victoria Street, Christchurch 8013
Country: New Zealand
Accreditation Certificate Number and Date: Cert No. 1022 - 23 July 2009

ATTACHMENTS

Attach to this form:
1) A copy of the full test report, video, and a Test Data Summary Sheet for each test conducted in support of this request.
2) A drawing or drawings of the device(s) that conform to the Task Force-13 Drawing Specifications [Hardware Guide Drawing Standards]. For proprietary products, a single isometric line drawing is usually acceptable to illustrate the product, with detailed specifications, intended use, and contact information provided on the reverse. Additional drawings (not in TF-13 format) showing details that are key to understanding the performance of the device should also be submitted to facilitate our
Review.

</tbody>
</table>

Test Vehicle:

Designation: 1100C
Make/Model: Kin Rio Liftback LS
Dimensions (lwh): 4200 L x 1675 W x 1435 mm
Curb Wt.: 1100 kg
Test Inertial Wt.: 75 kg
Gross Static Wt.: 1175 kg

Impact Conditions:

Speed: 101.0 kph
Angle: 25°
Impact Point: 1.0 meter upstream of line post 11

Exit Conditions:

Exit Speed: 71 kph
Exit Angle: 3°

VDS: 11FL-3
CDC: 11LFE3
Max. Deformation: 275 mm

Post Impact Vehicle Behaviour:

Vehicle Stability: Good
Stopping Distance: 41 m
Initial Contact Length: 8.5 m
Roll Angle Max.: 12.0°
Pitch Angle Max.: -12.1°
Yaw Angle Max.: 254.5°

Vehicle Snagging: None
Vehicle Pocketing: None

Occupant Impact Velocity:

Longitudinal: 5.6 m/s
Lateral (optional): 4.9 m/s
AS1 (Acceleration Severity Index): 0.70

Occupant Ride down Deceleration:

x-direction: -10.2 g
y-direction: -8.6 g
THIV (optional): 24.7 kph at 0.1431 s on RHS (6.9 m/s)
PHD (optional): 10.3 g (0.4182 - 0.4282 s)

Test Article Deflections:

Dynamic: 0.99 m
Permanent: 0.77 m
Working Width: 0.99 m

Test Article Damage:

Moderate

Issue 12042011

  - **Longitudinal:** 4.4 m/s at 0.1842 s
  - **Lateral (optional):** 3.8 m/s at 0.1842 s
  - **ASI (Acceleration Severity Index):** 0.48

- **Occupant Ridedown Deceleration**
  - **x-direction:** -5.5 g (0.1999 – 0.2099 s)
  - **y-direction:** -4.8 g (0.3130 – 0.3239 s)
  - **THIV (optional):** 19.8 kph at 0.1765 s (5.5 m/s)
  - **PHD (optional):** 5.8 g (0.2056 – 0.2156 s)

- **Test Article Deflections**
  - **Dynamic:** 1.65 m
  - **Permanent:** 1.30 m
  - **Working Width:** 1.65 m

- **Test Article Damage**
  - **Mild**

**Issue:** 12042011
Ezy-Guard Smart, a member of the Ezy-Guard family, is a fully compliant MASH TL3 longitudinal guardrail barrier system. It can be used in locations where maximum dynamic deflections of 65 inches \[1650\text{mm}\] or less is acceptable. This system must be anchored with a suitable terminal system, ideally a TL3 crashworthy terminal system. The Ezy-Guard Smart W-beam longitudinal barrier system consists of W-beam guardrail attached to Ezy-Guard Smart Z-section line post via a guardrail carriage system and attachment bolt. The standard post spacing is 79 inches \[2000\text{mm}\], with 75 inches \[1905\text{mm}\] post spacing an optional alternative.
