Greg Kirchgesner
Xcessories Squared
P.O. Box 135
Auburn, Illinois 62615

Dear Mr. Kirchgesner:

This letter is in response to your request for the Federal Highway Administration (FHWA) to review a roadside safety system for eligibility for reimbursement under the Federal-aid highway program.

- Name of system: Surface Mount Slip Bases SMSB10-10-G and SMSB8-10-G
- Type of system: Triangular Slip Base Small Sign Support for Perforated Square Steel Tube (PSST) posts
- Test Level: NCHRP Report 350 Test Level 3
- Testing conducted by: N/A
- Date of request: June 28, 2011

**Decision:**
The following devices are eligible, with details provided below

- Surface Mount Slip Bases SMSB10-10-G and SMSB8-10-G

Based on a review of the information and calculations submitted by the manufacturer certifying the device described herein meets the crash test and evaluation criteria of the National Cooperative Highway Research Program (NCHRP) Report 350, the device is eligible for reimbursement under the Federal-aid highway program. Eligibility for reimbursement under the Federal-aid highway program does not establish approval or endorsement by the FHWA for any particular purpose or use.

The FHWA, the Department of Transportation, and the United States Government do not endorse products or services and the issuance of a reimbursement eligibility letter is not an endorsement of any product or service.

**Requirements**
To be found eligible for Federal-aid funding, roadside safety devices should meet the crash test and evaluation criteria contained in the National Cooperative Highway Research Program (NCHRP) Report 350 or the American Association of State Highway and Transportation Officials’ Manual for Assessing Safety Hardware (MASH).

File: s: //directory folder/HSST/Artimovich/SS-175
cc: HSST (NArtimovich; JDewar)
Description
You requested our review of two new slip base components that would work with your NCHRP Report 350 compliant Slip Base Tops and would use your Redi-Torque Hardware. The 8-inch version has the same geometry as your existing 8-inch Slip Base Tops, and the 10 3/8-inch version that has the same geometry as your existing 10 3/8-inch Slip Base Tops. You provided calculations (enclosed for reference) that show that both of the Surface Mount Slip Bases are stronger than the posts that they would support. They would be secured to flat concrete surfaces using standard concrete anchors that would be required to exceed the load capacities of the slip base & sign assembly to ensure proper functionality of the slip bases. The surface mount allows for installations on top of concrete medians instead of coring a large hole into them, when a slip base is desired in place of other sign post mounting devices. This mounting system is similar to the rigid foundations used when larger sized slip bases are crash tested.

Summary and Standard Provisions
Therefore, the systems described above and detailed in the enclosed drawings are eligible for reimbursement and may be installed under the range of conditions tested.

Please note the following standard provisions that apply to FHWA eligibility letters:

- This finding of eligibility does not cover other structural features of the systems, nor conformity with the Manual on Uniform Traffic Control Devices.
- Any changes that may influence system conformance with NCHRP Report 350 criteria will require a new reimbursement eligibility letter.
- Should the FHWA discover that the qualification testing was flawed, that in-service performance reveals safety problems, or that the system is significantly different from the version that was crash tested, we reserve the right to modify or revoke this letter.
- You are expected to supply potential users with sufficient information on design and installation requirements to ensure proper performance.
- You are expected to certify to potential users that the hardware furnished has the same chemistry, mechanical properties, and geometry as that submitted for review, and that it will meet the crash test and evaluation criteria of the NCHRP Report 350.
- To prevent misunderstanding by others, this letter of eligibility is designated as number SS-175 and shall not be reproduced except in full. This letter and the test documentation upon which it is based are public information. All such letters and documentation may be reviewed at our office upon request.
• This letter shall not be construed as authorization or consent by the FHWA to use, manufacture, or sell any patented system for which the applicant is not the patent holder. The FHWA does not become involved in issues concerning patent law. Patent issues, if any, are to be resolved by the applicant.

Sincerely yours,

Michael S. Griffith

WIND LOAD

Design Wind Pressure, \( P_z = 0.00256kGv^2C_d \)

Wind Variables:
- Centroid Sign Height, \( z = 10 \) ft
- Height and Exposure Factor, \( K_z = 0.87 \) (for \( z < 16.4 \) ft, Eq C 3-1, Table 3-5, p. 3-11)
- Gust Factor, \( G = 1.14 \) (p. 3-12)
- Wind Velocity, \( W = 50 \) mph (figure 3-2, p. 3-8.9)
- Importance Factor, \( I_r = 0.71 \) (table 3-2, p. 3-16)
- Sign Length, \( L = 4 \) ft
- Drag Coefficient, \( C_d = 1.25 \) (conservative based on L/W ration)(table 3-6, p. 3-17)
- Drag Coefficient, \( C_d = 1.25 \) (table 3-6, p. 3-17)
- Wind Pressure Sign, \( P_z = 18.3 \) psf
- Wind Pressure Post, \( P_p = 18.3 \) psf

Moment on Base from Post:
- Width of Post, \( w_p = 3 \) in
- \( M_{post} = 0.5w_{post}^2L^2 = 146 \) ft-lb

MAXIMUM SIGN AREA CALCULATIONS

Post
- Post 2 1/2" OD x 0.276" wall Sch. 80 Pipe
- ASTM 1011 Fy = 60000 psi
- Section Modulus of Post, \( S = 1.27 \) in3
- Yield Stress with 1/3 increase for Wind, \( F_{by} = 1.33F_y = 66850 \) psi
- Max. Moment on Post = \( M_p = S\frac{F_y}{12} = 5484 \) ft-lb
- Max Allowable Moment on Sign, \( M_s = M_p - M_{post} = 1399 \) ft-lb
- Max. Sign Area = \( M_s(P_{z}\times z)^2 = 45 \) ft²

Forged Top Receiver

See Accessories Squared Drawing SB10C-27PDD-G
- Ductile Iron Class 65-45-12, \( F_y = 45000 \) psi
- Thickness of Cast Piece, \( t = 0.27 \) in
- Inside Dimension of Cast Piece, \( d_1 = 3.00 \) in
- Outside Dimension of Cast Piece, \( d = 3.54 \) in
- Section Modulus of Cast Piece, \( S = \frac{\pi}{12}(d^3 - d_1^3)(32d) = 2.11 \) in³
- Yield Stress with 1/3 increase for Wind, \( F_{by} = 1.33F_y = 59850 \) psi
- Max. Moment on Receiver = \( M_p = S\frac{F_y}{12} = 10518 \) ft-lb
- Max Allowable Moment on Sign, \( M_s = M_p - M_{post} = 10372 \) ft-lb
- Max. Sign Area = \( M_s(P_{z}\times z)^2 = 57 \) ft²

Forged Base Plate
- Ductile Iron Class 65-45-12, \( F_y = 45000 \) psi
- Dist from Bolt to Critical Section = \( a = 0.736 \) in
- Dist Between Bolts = \( b = 5.235 \) in
- Width of Plate = \( 5.32 \) in
- Thickness of Forged Base Plate = \( 0.75 \) in
- Section Modulus at Critical Section = \( S = \frac{1}{6}w_{plate}^2 = 0.36 \) in³
- Yield Stress with 1/3 increase for Wind, \( F_{by} = 1.33F_y = 59850 \) psi
- Max Allowable Moment on Plate, \( M_p = F_{by}S = 21434 \) in-lb
- Max. Moment on Receiver = \( M_p = M_p(S_{plate})^2 = 11747 \) ft-lb
- Max Allowable Moment on Sign, \( M_s = M_p - M_{post} = 11601 \) ft-lb
- Max. Sign Area = \( M_s(P_{z}\times z)^2 = 64 \) ft²
Grade 6 Rod-Torque, Fy = 130000 psi
Bolt Diameter at Threads = D = 0.45 in
Area of Bolt, A = πD²/4 = 0.159 in²
Allowable Yield Load on Bolt, P = 1.33 Fy A = 2749 lbs
Allowable Yield Moment on Bolt Assembly, Mbolt = P b / 12 = 11996 ft-lb

Max Allowable Moment on Sign, Ms = Mbolt - Mpost = 11880 ft-lb
Max. Sign Area = Ms(Pas²)/2 = 65 ft²

Bottom Triangular Plate Plate
See Accessories Squared Drawing S10610-10-G
ASTM A572, Gd 50 = Fy = 50000 psi
Dist from Bolt to Critical Section A to Sign, a = 1.99 in
Dist Between Bolts A to Sign, b = 5.235 in
Width of Plate at Critical Section, w = 5.2 in
Thickness of Base Plate = 1.00 in
Section Modulus of Critical Section, S = 0.67 in³
Yield Stress with 1/3 increase for Wind, Fby = 1.33 Fy = 66500 psi

(1/3 stress A per table 3-1, p. 3-3)
Max Allowable Moment on Plate, Mpl = Fby/S = 57633 in-lb
Max. Moment on Receiver = Mp = (Mpl b/a)/12 = 12634 ft-lb
Max Allowable Moment on Sign, Ms = Mpl - Mpost = 12480 ft-lb
Max. Sign Area = Ms(Pas²)/2 = 68 ft²

3/8" Fillet Weld - Bottom Plate to Tube
Weld E70XX Electrodes
Weld Strength, Fy = 70000 psi
Tube Size, b = 3 in
Section Modulus of Weld, S = b² - 2/3 = 12 in³/lin
Weld size, w = 0.375 in
Weld Strength, W = 1.33 S 0.707 w/Fy = 24853 lb-in/in

Allowable Yield Moment on Weld, Mw = W S 12 = 24853 ft-lb
Max Allowable Moment on Sign, Ms = Mw - Mpost = 24537 ft-lb
Max. Sign Area = Ms(Pas²)/2 = 134 ft²

3"x3"x7ga. Bottom Tube
ASTM A500 Grade C, Fy = 50000 psi
Section Modulus of Tube, S = 1.897 in³
Yield Stress with 1/3 increase for Wind, Fby = 1.33 Fy = 66500 psi

(1/3 stress A per table 3-1, p. 3-3)
Max. Moment on Post = Mpl = S Fby / 12 = 10543 ft-lb
Max Allowable Moment on Sign, Ms = Mpl - Mpost = 10367 ft-lb
Max. Sign Area = Ms(Pas²)/2 = 57 ft²

Bottom Square Plate Plate
ASTM A572, Gd 50 = Fy = 50000 psi
Dist from Bolt to Critical Section A to Sign, a = 2.00 in
Dist Between Bolts A to Sign, b = 7 in
Width of Plate at Critical Section, w = 10 in
Thickness of Base Plate = 0.75 in
Section Modulus of Critical Section, S = 1.6 w² = 66500 psi
Yield Stress with 1/3 increase for Wind, Fby = 1.33 Fy = 66500 psi

(1/3 stress A per table 3-1, p. 3-3)
Max Allowable Moment on Plate, Mpl = Fby S = 62344 in-lb
Max. Moment on Receiver = Mp = (Mpl b/a)/12 = 16184 ft-lb
Max Allowable Moment on Sign, Ms = Mpl - Mpost = 18038 ft-lb
Max. Sign Area = Ms(Pas²)/2 = 99 ft²
