Mr. Henry A. Ross  
Plasticade  
7700 N. Austin Avenue  
Skokie, IL 60077

Dear Mr. Ross:

This letter is in response to your October 5, 2015 request for the Federal Highway Administration (FHWA) to review a roadside safety device, hardware, or system for eligibility for reimbursement under the Federal-aid highway program. This FHWA letter of eligibility is assigned FHWA control number WZ-343 and is valid until a subsequent letter is issued by FHWA that expressly references this device.

**Decision**

The following devices are eligible, with details provided in the form which is attached as an integral part of this letter:
- Plasticade 3200 Type III Barricade with Volcano Bases

**Scope of this Letter**

To be found eligible for Federal-aid funding, new roadside safety devices should meet the crash test and evaluation criteria contained in the American Association of State Highway and Transportation Officials’ Manual for Assessing Safety Hardware (MASH). However, the FHWA, the Department of Transportation, and the United States Government do not regulate the manufacture of roadside safety devices. Eligibility for reimbursement under the Federal-aid highway program does not establish approval, certification or endorsement of the device for any particular purpose or use.

This letter is not a determination by the FHWA, the Department of Transportation, or the United States Government that a vehicle crash involving the device will result in any particular outcome, nor is it a guarantee of the in-service performance of this device. Proper manufacturing, installation, and maintenance are required in order for this device to function as tested.
This finding of eligibility is limited to the crashworthiness of the system and does not cover other structural features, nor conformity with the Manual on Uniform Traffic Control Devices.

**Eligibility for Reimbursement**

Based solely on a review of crash test results and certifications submitted by the manufacturer, and the crash test laboratory, FHWA agrees that the device described herein meets the crash test and evaluation criteria of the American Association of State Highway and Transportation Officials' Manual for Assessing Safety Hardware (MASH). Therefore, the device is eligible for reimbursement under the Federal-aid highway program if installed under the range of tested conditions.

Name of system: Plasticade 3200 Type III Barricade with Volcano Bases  
Type of system: Work Zone Traffic Control  
Test Level: MASH TL-3  
Testing conducted by: E-Tech Testing Services, Inc.  
Date of request: October 5, 2015  
Date initially acknowledged: November 5, 2015  
Date of completed package: March 29, 2016

FHWA concurs with the recommendation of the accredited crash testing laboratory as stated within the attached form.

**Full Description of the Eligible Device**

The device and supporting documentation, including reports of the crash tests or other testing done, videos of any crash testing, and/or drawings of the device, are described in the attached form.

**Notice**

If a manufacturer makes any modification to any of their roadside safety hardware that has an existing eligibility letter from FHWA, the manufacturer must notify FHWA of such modification with a request for continued eligibility for reimbursement. The notice of all modifications to a device must be accompanied by:

- **Significant modifications** – For these modifications, crash test results must be submitted with accompanying documentation and videos.
- **Non-significant modifications** – For these modifications, a statement from the crash test laboratory on the potential effect of the modification on the ability of the device to meet the relevant crash test criteria.

FHWA's determination of continued eligibility for the modified hardware will be based on whether the modified hardware will continue to meet the relevant crash test criteria. You are expected to supply potential users with sufficient information on design, installation and maintenance requirements to ensure proper performance.
You are expected to certify to potential users that the hardware furnished has the same chemistry, mechanical properties, and geometry as that submitted for review, and that it will meet the test and evaluation criteria of the MASH.

Issuance of this letter does not convey property rights of any sort or any exclusive privilege. This letter is based on the premise that information and reports submitted by you are accurate and correct. We reserve the right to modify or revoke this letter if: (1) there are any inaccuracies in the information submitted in support of your request for this letter, (2) the qualification testing was flawed, (3) in-service performance or other information reveals safety problems, (4) the system is significantly different from the version that was crash tested, or (5) any other information indicates that the letter was issued in error or otherwise does not reflect full and complete information about the crashworthiness of the system.

**Standard Provisions**

- To prevent misunderstanding by others, this letter of eligibility designated as FHWA control number WZ-343 shall not be reproduced except in full. This letter and the test documentation upon which it is based are public information. All such letters and documentation may be reviewed upon request.

- This letter shall not be construed as authorization or consent by the FHWA to use, manufacture, or sell any patented system for which the applicant is not the patent holder.

- If the subject device is a patented product it may be considered to be proprietary. If proprietary systems are specified by a highway agency for use on Federal-aid projects: (a) they must be supplied through competitive bidding with equally suitable unpatented items; (b) the highway agency must certify that they are essential for synchronization with the existing highway facilities or that no equally suitable alternative exists; or (c) they must be used for research or for a distinctive type of construction on relatively short sections of road for experimental purposes. Our regulations concerning proprietary products are contained in Title 23, Code of Federal Regulations, Section 635.411.

Sincerely yours,

Michael S. Griffith
Director, Office of Safety Technologies
Office of Safety

Enclosures
Request for Federal Aid Reimbursement Eligibility of Highway Safety Hardware

I request the following devices be considered eligible for reimbursement under the Federal-aid highway program.

**Device & Testing Criterion** - Enter from right to left starting with Test Level

The Plasticade 3200 Type III Barricade with Volcano Base is the commercial embodiment of intellectual property that is not protected by patents. Plasticade does not pay royalties for sales of the Plasticade 3200 Type III Barricade with Volcano Base. The Plasticade 3200 Type III Barricade with Volcano Base was designed and developed by engineers at Plasticade.

Plasticade sponsored certain crash tests of the Plasticade 3200 Type III Barricade with Volcano Base; such tests were conducted by E-Tech Testing Services, an independent, wholly-owned subsidiary of Trinity Highway. E-Tech Testing Services is an International Standards Organization (“ISO”) 17025 accredited laboratory with American Association for Laboratory Accreditation (A2LA) Mechanical Testing certificate 989.01. Full-scale crash testing on the Plasticade 3200 Type III Barricade with Volcano Base was performed in accordance with testing criteria, as set forth by the Manual for Assessing Safety Hardware (“MASH”; 2009).
PRODUCT DESCRIPTION

<table>

</table>

The Plasticade® 3200 Type III Barricade with Volcano Base is a work zone traffic control device used to regulate, warn, and advise road users to traverse a section of highway or street in the proper manner. The barricade consists of a rubber Volcano Base with plastic uprights and plastic boards extruded from white UV stabilized high density polyethylene plastic. The test article is fitted with three 1 in by 8 in (25 by 203 mm) boards which are available sheeted with retro-reflective tape in a variety of widths. The overall height of the test article is 60 in (1524 mm) when restored from its collapsed storage position. The “worst case” test article configuration was selected for testing. The widest 12 ft. (3.7 m) boards were used and the total test article weight was 115 lb. (52.2 kg) including (2) Volcano Rubber bases weighing 43 lb. (19.5 kg) each. The test article was also fitted with two Empco-Lite Model 2006 Type A and C LED Warning Lights weighing 2.0 lb. (0.9 kg) each. The plastic uprights of the barricade were pinned to the Volcano Bases.

CRASH TESTING

By signature below, the Engineer affiliated with the testing laboratory, agrees in support of this submission that all of the critical and relevant crash tests for this device listed above were conducted to meet the MASH test criteria. The Engineer has determined that no other crash tests are necessary to determine the device meets the MASH crashworthiness

<tr>
<td>3-71 (1100C)</td>
<td>E-TECH Test 76-0415-006 was MASH Test 3-71 with a 2009 Kia Rio weighing 2,447 lbs. impacting the test article at the Critical Impact Angle. It was impacted in both normal and perpendicular orientations. The test articles were placed 19.7 ft. (6 m) apart and the second was turned 90 degrees relative to the first. The test was conducted at a 0 degree angle with the center of the vehicle bumper aligned with the vertical centerline of the test articles. The first impact took place with a normally orientated barricade. The 1100C vehicle bumper impacted the test article approximately 18 in. (457 mm) above ground level. The bottom board deformed from the test vehicle's bumper while the middle and top boards slid up the hood and over the top of the test vehicle. The plastic upright supports fractured upon initial impact approx. 12 in (305 mm) above the pinned connection to the Volcano Base. The lights remained attached to the test article. There was minor scuffing to the vehicle's hood but no windshield damage. The second impact took place with a perpendicular orientated barricade. The 1100C vehicle bumper impacted the test article approximately 18 in. (457 mm) above ground level. The bottom board buckled upon impact with the vehicle's bumper and the plastic upright on the leading edge fractured immediately. The middle and upper boards slid up the vehicle's hood and continued sliding up the windshield. As the vehicle passed over the Volcano bases, they engaged with the vehicle's undercarriage and travelled 48 ft. (14.6 m) and 53 ft. (16.2 m) downstream of the initial point of contact. One of the plastic upright supports fractured upon initial impact approx. 8 in (203 mm) above the pinned connection to the Volcano Base while the other plastic upright pulled out of the base entirely. The lights remained attached to the test article although one of the plastic lenses detached during the impact event. There was minor scuffing to the vehicle's hood and the top of the windshield exhibited minor cracking with no deformation or tearing of the liner. The device was judged to have successfully met all MASH evaluation criteria for Test 3-71 for work zone traffic control devices in both normal and perpendicular orientations.</td>

**ATTACHMENTS**

Attach to this form:

1) Additional disclosures of related financial interest as indicated above.
2) A copy of the full test report, video, and a Test Data Summary Sheet for each test conducted in support of this request.
3) A drawing or drawings of the device(s) that conform to the Task Force-13 Drawing Specifications [Hardware Guide Drawing Standards]. For proprietary products, a single isometric line drawing is usually acceptable to illustrate the product, with detailed specifications, intended use, and contact information provided on the reverse. Additional drawings (not in TF-13 format) showing details that are relevant to understanding the dimensions and performance of the device should also be submitted to facilitate our review.
