Mr. Henry A. Ross  
Plasticade  
100 Howard Avenue  
Des Plaines, IL 60018  
USA

Dear Mr. Ross:

This letter is in response to your February 24, 2020 request for the Federal Highway Administration (FHWA) to review a roadside safety device, hardware, or system for eligibility for reimbursement under the Federal-aid highway program. This FHWA letter of eligibility is assigned FHWA control number WZ-409 and is valid until a subsequent letter is issued by FHWA that expressly references this device.

**Decision**

The following device is eligible within the length-of-need, with details provided in the form which is attached as an integral part of this letter:

- Plasticade® Plasticade® Type I and Type II Barricade

**Scope of this Letter**

To be found eligible for Federal-aid funding, new roadside safety devices should meet the crash test and evaluation criteria contained in the American Association of State Highway and Transportation Officials’ (AASHTO) Manual for Assessing Safety Hardware (MASH). However, the FHWA, the Department of Transportation, and the United States Government do not regulate the manufacture of roadside safety devices. Eligibility for reimbursement under the Federal-aid highway program does not establish approval, certification or endorsement of the device for any particular purpose or use.

This letter is not a determination by the FHWA, the Department of Transportation, or the United States Government that a vehicle crash involving the device will result in any particular outcome, nor is it a guarantee of the in-service performance of this device. Proper manufacturing, installation, and maintenance are required in order for this device to function as tested.

This finding of eligibility is limited to the crashworthiness of the system and does not cover other structural features, nor conformity with the Manual on Uniform Traffic Control Devices.
Eligibility for Reimbursement

Based solely on a review of crash test results and certifications submitted by the manufacturer, and the crash test laboratory, FHWA agrees that the device described herein meets the crash test and evaluation criteria of the AASHTO’s MASH. Therefore, the device is eligible for reimbursement under the Federal-aid highway program if installed under the range of tested conditions.

Name of system: Plasticade® Plasticade® Type I and Type II Barricade
Type of system: Work Zone
Test Level: MASH Test Level 3 (TL3)
Testing conducted by: Texas A&M Transportation Institute (TTI).
Date of request: February 24, 2020

FHWA concurs with the recommendation of the accredited crash testing laboratory on the attached form.

Full Description of the Eligible Device

The device and supporting documentation, including reports of the crash tests or other testing done, videos of any crash testing, and/or drawings of the device, are described in the attached form.

Notice

This eligibility letter is issued for the subject device as tested. Modifications made to the device are not covered by this letter. Any modifications to this device should be submitted to the user (i.e., state DOT) as per their requirements.

You are expected to supply potential users with sufficient information on design, installation and maintenance requirements to ensure proper performance.

You are expected to certify to potential users that the hardware furnished has the same chemistry, mechanical properties, and geometry as that submitted for review, and that it will meet the test and evaluation criteria of AASHTO’s MASH.

Issuance of this letter does not convey property rights of any sort or any exclusive privilege. This letter is based on the premise that information and reports submitted by you are accurate and correct. We reserve the right to modify or revoke this letter if: (1) there are any inaccuracies in the information submitted in support of your request for this letter, (2) the qualification testing was flawed, (3) in-service performance or other information reveals safety problems, (4) the system is significantly different from the version that was crash tested, or (5) any other information indicates that the letter was issued in error or otherwise does not reflect full and complete information about the crashworthiness of the system.
**Standard Provisions**

- To prevent misunderstanding by others, this letter of eligibility designated as FHWA control number WZ-409 shall not be reproduced except in full. This letter and the test documentation upon which it is based are public information. All such letters and documentation may be reviewed upon request.

- This letter shall not be construed as authorization or consent by the FHWA to use, manufacture, or sell any patented system for which the applicant is not the patent holder.

- This FHWA eligibility letter is not an expression of any Agency view, position, or determination of validity, scope, or ownership of any intellectual property rights to a specific device or design. Further, this letter does not impute any distribution or licensing rights to the requester. This FHWA eligibility letter determination is made based solely on the crash-testing information submitted by the requester. The FHWA reserves the right to review and revoke an earlier eligibility determination after receipt of subsequent information related to crash testing.

Sincerely,

Michael S. Griffith
Director, Office of Safety Technologies
Office of Safety

Enter below all disclosures of financial interests as required by the FHWA `Federal-Aid Reimbursement Eligibility Process for Safety Hardware Devices` document.

Texas A&M Transportation Institute (TTI) was contracted by Plasticade® to perform full-scale crash testing of the Plasticade® Type I and Type II Barricade. There are no shared financial interests in the Plasticade® Type I and Type II Barricade by TTI, or between Plasticade® and TTI, other than costs involved in the actual crash tests and reports for this submission to FHWA.

690900-PLP7&8
PRODUCT DESCRIPTION

**New Hardware or**

- [ ] Significant Modification
- [ ] Modification to existing hardware

The Plasticade® Type I and Type II Barricade is 40 inches tall, 25 inches wide, and 43 inches long. The test article consisted of two main components made from High Density Polyethylene (HDPE) plastic connected at the hinges. A safety light (Empco-Lite Model 2006 with four D-cell batteries) was attached to the top of the test article, bringing the total height of the barricade to 47.3 inches to the top of the safety light. The test article weighed 27 lb (including 10 lb of internal ballast sand and the 3-lb safety light) plus one 35 lb sand bag placed over one lower leg.

CRASH TESTING

By signature below, the Engineer affiliated with the testing laboratory, agrees in support of this submission that all of the critical and relevant crash tests for this device listed above were conducted to meet the MASH test criteria. The Engineer has determined that no other crash tests are necessary to determine the device meets the MASH criteria.

**Engineer Name:**

D. Lance Bullard, Jr., P.E.

**Engineer Signature:**

D. Lance Bullard, Jr.

**Address:**

3100 SH47, Bldg 7091, Bryan, TX, 77807

<tr>
<th>Required Test Number</th>
<th>Narrative Description</th>
<th>Evaluation Results</th>
</tr>
</thead>
<tbody>
<tr>
<td>3-70 (1100C)</td>
<td>3-70 MASH states that Test 3-70 for small vehicles is considered optional for work-zone traffic control devices weighing less than 220 lb, because velocity changes during low-speed impacts with freestanding, lightweight features will be within acceptable limits. The Plasticade® Type I and Type II Barricade traffic control device weighed 27 lb (including 10 lb of internal ballast sand and the 3-lb safety light), exclusive of the sandbags. Therefore, MASH Test 3-70 was not performed on this traffic control device.</td>
<td>Non-Critical, not conducted</td>
</tr>
<tr>

<td>----------------------</td>
<td>------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------</td>
<td>--------------------</td>
</tr>
<tr>
<td>3-71 (1100C)</td>
<td>3-71 MASH Test 3-71 involved an 1100C vehicle weighing 2420 lb ± 55 lb impacting the traffic control device at an impact speed of 62 mi/h ± 2.5 mi/h. Per MASH recommendations, the device was tested at critical impact angles (CIAs) of 90° ± 1.5° and 0° ± 1.5°. The results of test 690900-PLP7 conducted on October 25, 2019 are found in TTI Test Report number 690900-PLP7&amp;8. The test vehicle was traveling at an impact speed of 61.6 mi/h when it contacted the first barricade at an impact angle of 0°. The vehicle was traveling at an impact speed of 59.7 mi/h and impact angle of 90° when it contacted the second barrier. Brakes on the vehicle were applied after loss of contact with the second barricade, and the vehicle came to rest 315 ft downstream of the impact. The barricades fractured into numerous pieces. The debris field extended from 37 ft to 165 ft downstream of impact and from 25 ft to the left and 7 ft to the right of the vehicle path. The front bumper and hood were damaged. The hood sustained four small deformation areas, one 6 inches × 5 inches × 0.5 inch deep on the right side, a second 3 inches × 5 inches × 0.25 inch near front center, third 14 inches × 14 inches × 0.5 inch at the left, and a fourth 7 inches × 2 inches × 0.25 inch at the left rear. There was no damage to the windshield. No occupant compartment deformation or intrusion was observed. MASH does not require instrumentation of the vehicle when impacting lightweight, freestanding work zone traffic control devices weighing less than 220 lb, therefore the occupant risk factors were not calculated for this test. The Plasticade® Type I and Type II Barricade weighed 27 lb (including 10 lb of internal ballast sand and the 3-lb safety light), exclusive of the sandbags. The Plasticade® Type I and Type II Barricade performed acceptably for MASH test 3-71 with impact angles of 0° and 90°.</td>
<td>PASS</td>
</tr>
</tbody>
</table>
MASH Test 3-72 involves a 2270P vehicle weighing 5000 lb ± 110 lb impacting the traffic control device at an impact speed of 62 mi/h ± 2.5 mi/h. Per MASH recommendations, the device was tested at critical impact angles (CIAs) of 90° ± 1.5° and 0° ± 1.5°.

The results of test 690900-PLP8 conducted on October 25, 2019 are found in TTIT Test Report number 690900-PLP7&8. The test vehicle was traveling at an impact speed of 61.7 mi/h when it contacted the first barricade at an impact angle of 0°. The vehicle was traveling at an impact speed of 60.6 mi/h and impact angle of 90° when it contacted the second barrier. Brakes on the vehicle were applied after loss of contact with the second barricade, and the vehicle came to rest 395 ft downstream of the impact. The first barricade fractured into numerous pieces with a debris field extending from 48 ft to 118 ft downstream of impact and from 4 ft to 12 ft to the right of the vehicle path. The second barricade remained intact (besides the safety light) and came to rest 192 ft downstream and 3 ft to the right of the vehicle path. The grill and hood were damaged. The hood sustained one small area of deformation. There was no damage to the windshield. No occupant compartment deformation or intrusion was observed.

MASH does not require instrumentation of the vehicle when impacting lightweight, freestanding work zone traffic control devices weighing less than 220 lb, therefore the occupant risk factors were not calculated for this test. The Plasticade® Type I and Type II Barricade weighed 27 lb (including 10 lb of internal ballast sand and the 3-lb safety light), exclusive of the sandbags.

The Plasticade® Type I and Type II Barricade performed acceptably for MASH test 3-72 with impact angles of 0° and 90°.

| 3-72 (2270P) | PASS |

Full Scale Crash Testing was done in compliance with MASH by the following accredited crash test laboratory (cite the laboratory’s accreditation status as noted in the crash test reports):
ATTACHMENTS

Attach to this form:

1) Additional disclosures of related financial interest as indicated above.
2) A copy of the full test report, video, and a Test Data Summary Sheet for each test conducted in support of this request.
3) A drawing or drawings of the device(s) that conform to the Task Force-13 Drawing Specifications [Hardware Guide Drawing Standards]. For proprietary products, a single isometric line drawing is usually acceptable to illustrate the product, with detailed specifications, intended use, and contact information provided on the reverse. Additional drawings (not in TF-13 format) showing details that are relevant to understanding the dimensions and performance of the device should also be submitted to facilitate our review.

General Information
Test Agency Texas A&M Transportation Institute (TTI)
Test Standard Test No. 690900-PLP7
TTI Test No. 690900-PLP7
Test Date 2019-10-25

Test Article
Type Work-Zone Traffic Control Device - Type I and Type II Barricade
Name Plasticade® Type I and Type II
Installation Height/Weight 47.3 inches / 27 lb (both include light)
Material or Key Elements HDPE legs, HDPE boards, safety light, and one 35-lb sand bag
Soil Type and Condition Concrete pavement, damp

Test Vehicle
Type/Designation 1100C
Make and Model 2011 Kia Rio
Curb 2343 lb
Test Inertial 2441 lb
Dummy 165 lb
Gross Static 2606 lb
Impact Conditions
Speed Barricade #1 61.6 m/h
Angle Barricade #1 0°
Speed Barricade #2 59.7 m/h
Angle Barricade #2 90°
Kinetic Energy #1 & #2 310 & 291 kip-ft
Exit Conditions
Speed Barricade #1 59.7 m/h
Speed Barricade #2 59.7 m/h

Post-Impact Trajectory
Stopping Distance 315 ft downstream

Maximum Test Debris Scatter
Barricade #1 37 to 165 ft downstream

Vehicle Damage
VDS 12FD1
CDC 12FDEN1
Max. Exterior Deformation 0.5 inch
Max. Occupant Compartment FS0000000

Figure 5.6. Summary of Results for MASH Test 3-71 at 0° and 90° on Plasticade® Type I and Type II Barricades.
### General Information
- **Test Agency**: Texas A&M Transportation Institute (TTI)
- **Test Standard Test No.**: MASH Test 3-72 at 0° and 90°
- **TTI Test No.**: 690900-PLP8
- **Test Date**: 2019-10-25

### Test Article
- **Type**: Work-Zone Traffic Control Device - Type I and Type II Barricade
- **Name**: Plasticade® Type I and Type II Barricade
- **Installation Height/Weight**: 47.3 inches / 27 lb (both include light)
- **Material or Key Elements**: HDPE legs, HDPE boards, safety light, and one 35-lb sand bag
- **Soil Type and Condition**: Concrete pavement, damp

### Test Vehicle
- **Type/Designation**: 2270P
- **Make and Model**: 2014 RAM 1500
- **Curb**: 4977 lb
- **Test Inertial**: 5062 lb
- **Dummy**: No dummy
- **Gross Static**: 5062 lb

### Impact Conditions
- **Speed Barricade #1**: 61.7 m/s
- **Angle Barricade #1**: 0°
- **Speed Barricade #2**: 60.6 m/s
- **Angle Barricade #2**: 90°
- **Kinetic Energy #1 & #2**: 644 & 621 kip-ft

### Exit Conditions
- **Speed Barricade #1**: 60.6 m/s
- **Speed Barricade #2**: 59.8 m/s

### Post-Impact Trajectory
- **Stopping Distance**: 395 ft downstream
- **Maximum Test Debris Scatter**
  - **Barricade #1**: 48 to 118 ft downstream
  - **Barricade #2**: 4 to 12 ft right 192 ft downstream

### Vehicle Damage
- **VDS**: 3 ft right
- **CDC**: 12FD1
- **Max. Exterior Deformation**: 12FDEW1
- **OCDI**: None
- **Max. Occupant Compartment Deformation**: None
- **Windshield Damage**: None
